Protect your people, property and assets with REACT

Ramtech REACT is a cloud-based platform that delivers 24/7 monitoring of your site, providing accurate and real-time information about incidents on site to the individuals that need to know.

Ramtech Electronics have developed REACT to assist the likes of senior managers, project owners and safety teams in the challenge of protecting vital parts of their projects such as personnel, assets, equipment and properties.

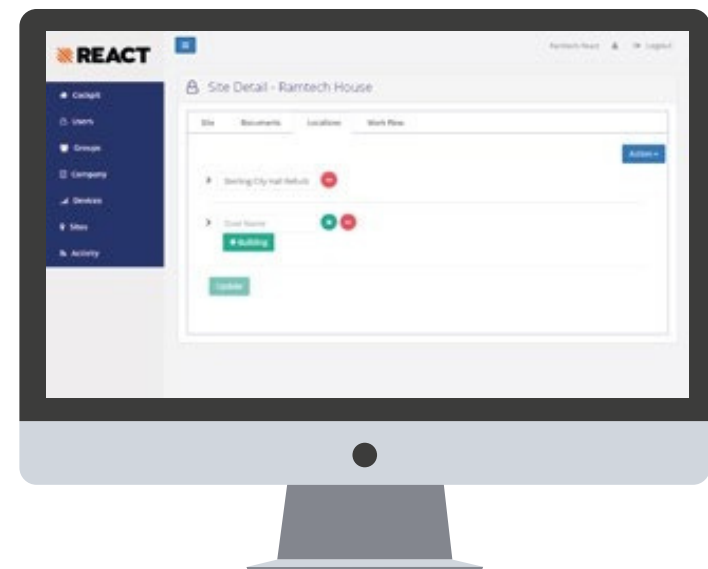

REACT has been created as a user-friendly cloud-based solution with a focus on ergonomics. Management of sites, users and more is done via the browser-based admin portal, with incidents raised via the REACT app (available on Android and iOS). REACT is designed to work with Ramtech's WES or WiSE platforms, or it can operate as a standalone system.

The REACT cloud portal allows administrators to add all required information to get the most out of REACT, from groups of users to locating devices onto pre-loaded site maps using a simple 'pin drop' feature. You can specify who receives specific alerts, with additional benefits of geofencing and optional time-restriction features.

The REACT app is available to admin users and personnel. This is used to create alerts, ranging from Fire alerts to Water Damage, Hazard warnings to the Lone Worker feature - the latter being ideal for keeping the safety of individuals who commonly work alone in check. Information from the app, including the ability to add photographs in real-time, is then sent via SMS, Mobile and Email options to those who need to know.

The REACT system

1

Alert is raised from site via the REACT app

2

Notification sent via the cloud to specified receivers

3

Receivers then respond as necessary, calling in emergency services if required

REACT's key benefits

Instant notifications

Accurate, specific and personalised notifications delivered to all the people that need it in real-time.

Customised receivers

Alert notifications can have customised receivers, no matter where in the world they are.

Accountability

Two-way communications mean alert response is required and recorded for accountability.

Bespoke to your requirements

Alerts and branding easily customised to match your needs.

Connect to your systems

REACT can connect to a Ramtech WES network, a Ramtech WiSE network, both, or neither – plus it can work very effectively as a standalone system.

Full support

Our experts will work with you to make sure you fully understand the system. We provide dedicated 'How To' videos, additional online support such as Live Demonstrations and a customer support helpline, where you can speak directly to our product experts.
